# ABOUT US

**Golden Paints** was established in Jordan in 2009 and is a leading manufacturer of high-quality paints and coatings. With over **30 years** of industry experience. Operating on facility **100,000 square meters**, the company specializes in the production of automotive, architectural, wood, industrial and solvent and powder coatings. With an annual production capacity of nearly **20,000 tons**, **Golden Paints** exports to over **33 countries** across the World. The company has established itself as an industry leader through innovation, a strong commitment to quality, and a focus on delivering exceptional customer service.

# ABOUT US

**Golden Industrial Paints** offers a complete protective system for metal structures, equipment, and steel fabrications. The range is organized into two main groups: **Primers**, which prepare and protect the surface against corrosion and ensure strong adhesion, and **Top Coats**, which provide color, gloss, and additional durability. Each product is developed to work as part of an integrated system, allowing specifiers and applicators to design the right solution for different industrial environments and performance requirements.

# PRIMERS

**GOLDEN  
PAINTS**

## Metal Primer

A general-purpose metal primer designed for steel and iron surfaces. It promotes good adhesion for subsequent top coats and provides basic protection against corrosion in mild to medium exposure conditions. Suitable for structural steel, fabricated metalwork, doors, frames, and general maintenance applications.

**GOLDEN  
PAINTS**

## **Zinc Phosphate Metal Primer (Anti-Rust):**

An anti-corrosive metal primer based on zinc phosphate pigments. It offers enhanced rust protection for structural steel, gates, handrails, frames, and other metal components, and is typically used as the first coat in industrial paint systems where improved durability and corrosion resistance are required.

**GOLDEN  
PAINTS**

## **Metal Shield Primer (Galvanized Steel):**

A special primer developed as part of the Metal Shield system for use on galvanized steel substrates. It ensures strong adhesion on galvanized surfaces that are usually difficult to coat with conventional primers and prepares them for Metal Shield top coats in aggressive environments such as coastal, industrial, or outdoor exposure.

**GOLDEN  
PAINTS**

## **Epoxy Zinc Phosphate Primer:**

A two-component epoxy primer pigmented with zinc phosphate for high-performance corrosion protection. It is suitable for steel structures, tanks, pipes, platforms, and industrial steelwork exposed to harsh conditions, and is designed to be used as a base coat under epoxy or polyurethane top coats in demanding systems.

# Top Coats

**GOLDEN  
PAINTS**

## Varnish Enamel:

A clear or lightly tinted enamel varnish used as a finishing layer over properly prepared or pre-painted surfaces. It enhances gloss and appearance while adding an extra layer of protection against scratching, handling, and light weathering, and can be used on metal or wood within appropriate systems.

**GOLDEN  
PAINTS**

## Enamel Paint:

A decorative and protective enamel top coat for metal and industrial surfaces, available in high gloss or semi-gloss finishes. It provides a smooth, hard-wearing film with good resistance to cleaning and handling, suitable for doors, machinery, railings, and a wide range of fabricated metal components.

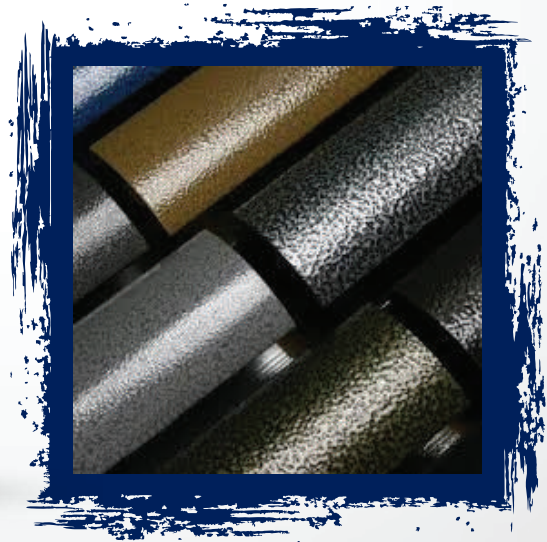

**GOLDEN  
PAINTS**

## Hammer Finish:

A hammered-effect top coat that produces a mottled, textured appearance on metal surfaces. It helps to hide surface defects and irregularities, making it ideal for cabinets, electrical panels, equipment housings, metal furniture, and other applications where a robust decorative industrial look is desired

**GOLDEN  
PAINTS**

## **Metal Shield:**

A high-performance industrial top coat within the Metal Shield system. It is designed to protect steel structures from weathering and corrosion while maintaining color and gloss over time. Recommended for exterior and exposed metal-work such as frameworks, pipes, fences, and structural elements.

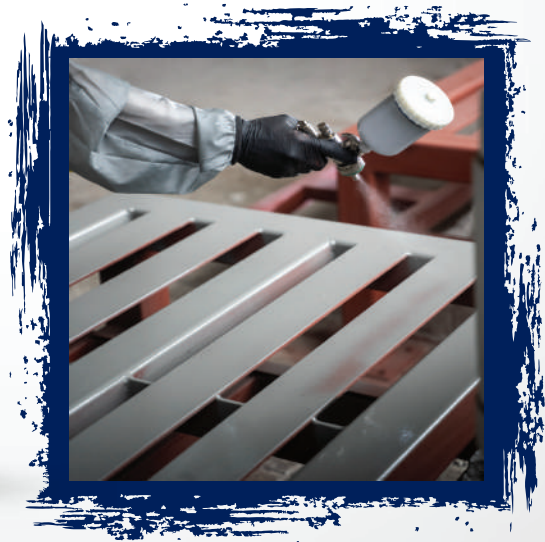

**GOLDEN  
PAINTS**

## **Epoxy Top Coat:**

A two-component epoxy top coat offering excellent chemical and abrasion resistance. It is recommended for industrial floors, tanks, platforms, machinery bases, and equipment in areas exposed to oils, chemicals, and mechanical wear, and is typically used over epoxy primers or intermediate coats.

**GOLDEN  
PAINTS**

## Quick Dry Synthetic:

A fast-drying synthetic top coat for metal surfaces, formulated to reduce downtime and speed up handling. It is suitable for maintenance work, production lines, and projects where shorter drying times are required compared to conventional

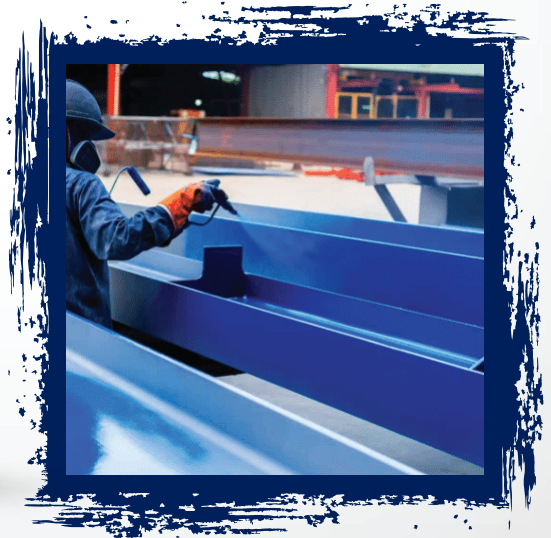

**GOLDEN  
PAINTS**

## Synthetic:

A conventional synthetic enamel top coat that provides a durable, glossy finish for general metalwork. It is used where standard drying times are acceptable and long-term appearance and protection are needed, such as on structural steel, doors, frames, and general industrial fabrications.
